

Metadata Application Profile Guidelines for DSCI/LIB350m Fall 2025

What is this document?

You will be creating a **metadata application profile guidelines document** – a comprehensive set of instructions and standards that will guide how items in your digital collection are cataloged and described.

Why are you creating this?

Think of this document as a blueprint or instruction manual. When multiple people contribute to a digital collection, they need to describe items in consistent, predictable ways. Without clear guidelines, one person might catalog a photograph one way, while another person catalogs it completely differently. This inconsistency makes it difficult (or impossible) for users to find what they're looking for.

Your guidelines document ensures that:

- **Anyone** cataloging items for your collection knows exactly what information to include and how to format it
- Items are described **consistently** across the entire collection
- Users can **find** what they need through effective searching and browsing
- The collection is **usable** and **accessible** to your intended audience
- **Meet CollectionBuilder data entry standards** in order for the tool to operate properly.

 - Metadata Formatting: <https://collectionbuilder.github.io/cb-docs/docs/metadata/formatting/>

Your document should answer:

- What metadata fields (metadata elements!) should be used for each item?
 - Is the metadata field one of the 15 Simplified DublinCore metadata fields?
 - Is the metadata field one that my instructor requires?
 - Is the metadata field required for cataloging?
 - What information goes in each field?
 - Are there controlled vocabularies or specific standards to follow?
 - How should that information be formatted? Does a computer system require information be formatted in a specific way to make sure the software works properly?
